🔗 KashifHussain662

Mobile App Developer with over 1 year of experience specializing in React Native, building cross-platform mobile apps and responsive websites using React, Bootstrap, HTML, and CSS. Passionate about learning and delivering user-focused solutions with up-to-date technologies.

📁 PROFESSIONAL EXPERIENCE

React Native Developer, Archive Services

01/2024 – present | Karachi, Pakistan

- Developed and maintained cross-platform mobile applications using **React Native**, ensuring smooth performance on **Android** devices.
- Integrated **RESTful APIs**, debugged issues, and optimized application performance to improve user experience and reduce load times.
- Built **responsive** and visually appealing websites using **HTML, CSS, JavaScript, Bootstrap, and React**, following modern web standards.
- Ensured **cross-browser and cross-device compatibility**, continuously optimizing layout and responsiveness for various screen sizes and resolutions.
- Collaborated closely with **UI/UX designers** to implement interactive and user-friendly features, enhancing the overall user interface.
- Utilized **Git** for version control and managed project workflows effectively. Deployed React Native apps using **Expo**, streamlining the development and testing process on Android.

🎓 EDUCATION

Advance Diploma in Software Engineering,

2023 – present | Karachi, Pakistan

Aptech Learning Center Karachi

Diploma in Information Technology,

2021 – 2022 | Ghotki, Pakistan

Information Technology Center Ghotki

FSc Pre-Engineering, Government Degree College Ghotki

2020 | Ghotki, Pakistan

🧠 SKILLS

Mobile App Development

React Native, Flutter (Basic), JavaScript

Web Development

HTML, CSS, JS, Bootstrap, React

API Integration

RESTful APIs, Axios

Version Control

Git, GitHub

Bug Fixing & Debugging

Chrome DevTools, React Native Debugger

Tools & Platforms

Expo (React Native), Firebase (Authentication, Realtime Database)

Online Lawyer Services Website,

Technologies Used: HTML, CSS, Bootstrap, JavaScript, PHP, XAMPP, MySQL

Developed a fully functional web-based platform connecting clients with lawyers, as part of a 4-member group project in the 2nd semester (led the team). The system included separate registration for clients and lawyers, lawyer profile browsing, appointment booking, and an admin panel for data management.

Key Features:

- Lawyer and client login/registration system
- Search by location and specialization (e.g., criminal, divorce, civil)
- Appointment scheduling with profile viewing
- Admin dashboard for managing users and appointments

Role: Group Leader / Full-stack Developer

Duration: 1 Month

GitHub Repository: github.com/KashifHussain662/2nd_Semester_eproject 

CloudVault – Cross-Platform Document Management System,

Web (React.js) & Android (React Native)

Designed and developed a secure, user-friendly document management platform as a web app (React.js) and Android mobile app (React Native). Users can efficiently manage documents and folders with features like scanning, editing, sharing, moving, and password protection. Supported individual and team collaboration with integrated real-time chat using Firebase. Delivered a clean, responsive interface ensuring seamless user experience across devices.

Key Features:

- Cross-platform availability: Web (React.js) and Android (React Native)
- Document scanning, uploading, editing, deleting, and moving
- Folder-level password protection and user-based access control
- Real-time chat functionality integrated using Firebase
- Team collaboration features with shared folder access
- Mark documents as favorites for quick access
- Responsive and modern UI across all screen sizes

Alveen Luxe – Full-Stack E-Commerce Platform with Customer & Admin Panels,

React.js (Vite) | Tailwind CSS | Firebase | Netlify 

Designed and developed a modern, responsive e-commerce platform featuring a **customer panel** and an **admin panel**. Customers can seamlessly browse products, place orders, and manage their profiles, while administrators can efficiently manage products, orders, and users. The platform leverages **Firebase** for backend services including authentication, database, and order tracking, ensuring secure and scalable operations. Deployed live on **Netlify** with a clean and optimized UI built using **Tailwind CSS**.

Key Features:

- Customer panel with product browsing, cart, checkout, and order history
- Admin panel for product management, order tracking, and user control
- Secure authentication and role-based access control (Firebase Auth)
- Real-time order updates and database synchronization with Firebase
- Fully responsive design using Tailwind CSS for seamless experience across devices
- Deployed on Netlify with fast performance and continuous integration
